Quick User Guide

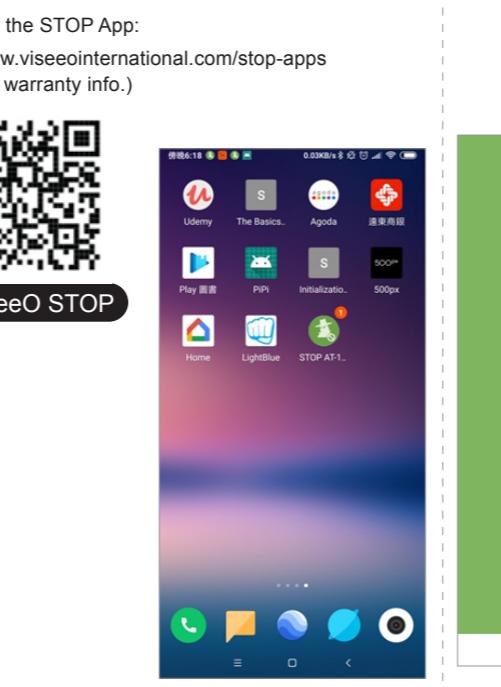

Viseeo

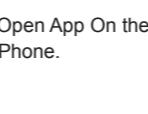

Installing Batteries

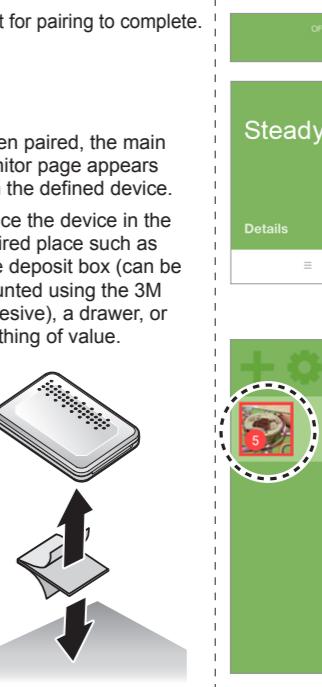

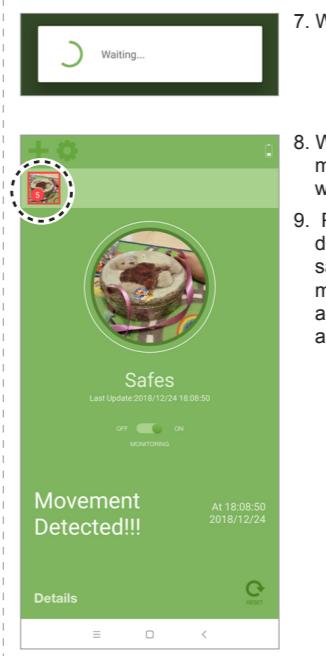

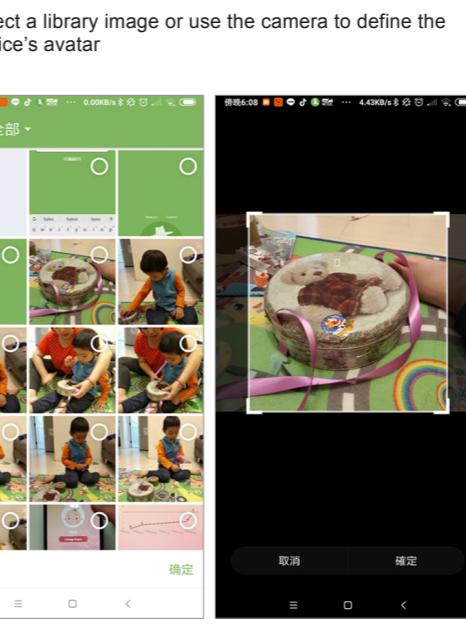

Downloading the App

Pairing

- Open App On the Mobile Phone.
- The AT-1 main menu displays:
 - + Pair a new device**
 - i View instruction guide**
 - BUY purchase new devices via Triamp website**
- In the Pairing screen, tap **+** to add a device.
- App scans for new devices.
- Once found, tap **STOP** to add the detected device.
- Note: Only one device can be paired at a time. For multiple devices, install batteries on the first device and pair it. Once the first device is paired, perform the same procedure for the remaining device.
- Enter the designated name for the STOP device (e.g. Safe Deposit Box).

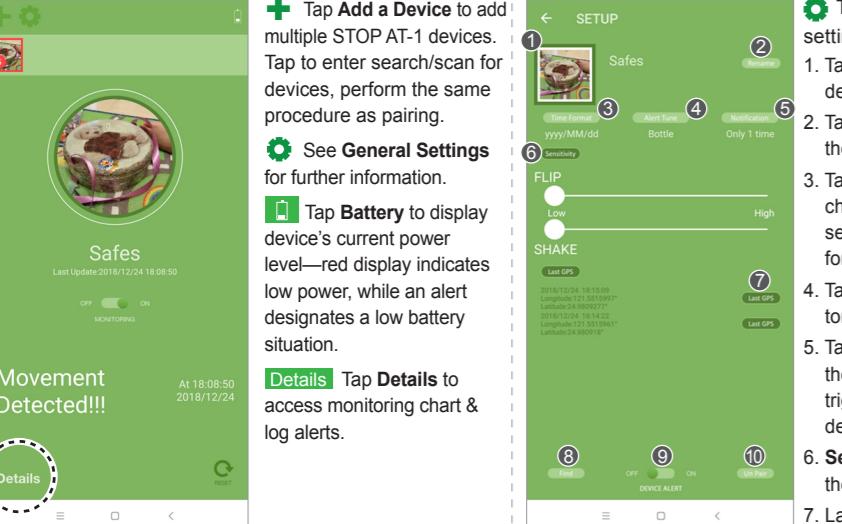

- Wait for pairing to complete.
- When paired, the main monitor page appears with the defined device.
- Place the device in the desired place such as safe deposit box (can be mounted using the 3M adhesive), a drawer, or anything of value.
- Make sure the Monitoring function is **ON**. Once the device is placed in the desired location and stabilized, tap the **Reset** button  on the main monitor page (bottom right corner). The term **Movement Detected!!!** reverts to **Steady**. See the video link below: <https://photos.app.goo.gl/HtUsGTu31n5ZTn86>
- Once movement is detected, the user is alerted and the label changes from **Steady** to **Movement Detected!!!**, the circle around the device image flashes red, and a number counter displays the number of movements.

Note: Tapping **Reset** clears the number counter.

Main Menu

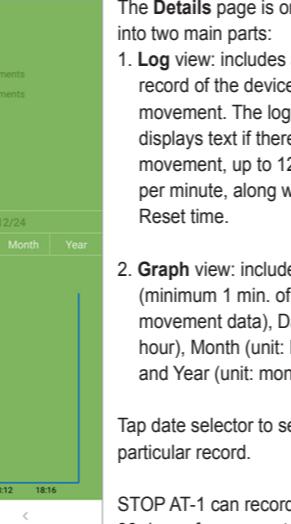

General Settings

- Tap **Add a Device** to add multiple STOP AT-1 devices. Tap to enter search/scan for devices, perform the same procedure as pairing.
- See **General Settings** for further information.
- Tap **Battery** to display device's current power level—red display indicates low power, while an alert designates a low battery situation.
- Tap **Details** to access monitoring chart & log alerts.
- Tap to access general settings.
- Tap the icon to change device image.
- Tap **Rename** to change the device name.
- Tap **Time Format** to change time display settings (British or US format)
- Tap **Alert Tune** to select tone for movement alerts.
- Tap **Notification** to define the reminder frequency for triggered alerts—Off designates vibration only.
- Sensitivity** is disabled in the official version.
- Last GPS records the last known GPS coordinates from the device when Steady is initiated. Tap the Map by using the **Last GPS** button on right side.
- Tap **Find** to enable the built-in buzzer on the device to detect its location.
- Tap **Device Alert** to enable the built-in buzzer when movement is detected.
- Tap **Unpair** to delete the current device connection/pairing

- Note:** Once the device is paired with this App and smart phone, the device cannot be connected to another smart phone. To connect the device to a different smart phone, first unpair the device by pressing the Unpair button and then confirming data deletion. If the App is accidentally deleted without deleting the device, the device locks due to previous pairing/connection. In order to release the device, use the included pick tool to open the device covers, then remove the battery for 2 seconds before reinstalling the battery. The user will have 2 minutes to pair with a new phone or new app again. After 2 minutes the device reverts to the previous connection (i.e. cannot pair/connect with the new app or new device).

Details

Safety – Must Read Before Use

- The **Details** page is organized into two main parts:
- Log view:** includes a text record of the device movement. The log displays text if there is movement, up to 12 logs per minute, along with Reset time.
 - Graph view:** includes Hour (minimum 1 min. of movement data), Day (unit: hour), Month (unit: Day), and Year (unit: month)
- Tap date selector to select a particular record.
- STOP AT-1 can record up to 30 days of movement data without connecting to App.
